

# EN537 Smart Encoder

## ENT Caption Ready

Convert text input from your newsroom computer teleprompter feed into CEA-608/708 captions.

## CaptionGuard Speech Recognition

Use the CaptionGuard feature to access EEG's speech recognition cloud, Lexi™, on-demand and watch the captions roll in. Supplement your existing caption data sources to ensure full program caption coverage.

## Connect to On-site and Remote Captioners

Live captioners can connect to the EN537 over TCP/IP, directly through the unit's serial port, or using the optional telco modem. *Please note the EN537 is not an iCap compatible product.*

## Maximum Cost Efficiency

The EN537 is an affordable, non-iCap, caption encoder for broadcasters who require basic communications connections and caption insertion features to achieve caption coverage compliance.
